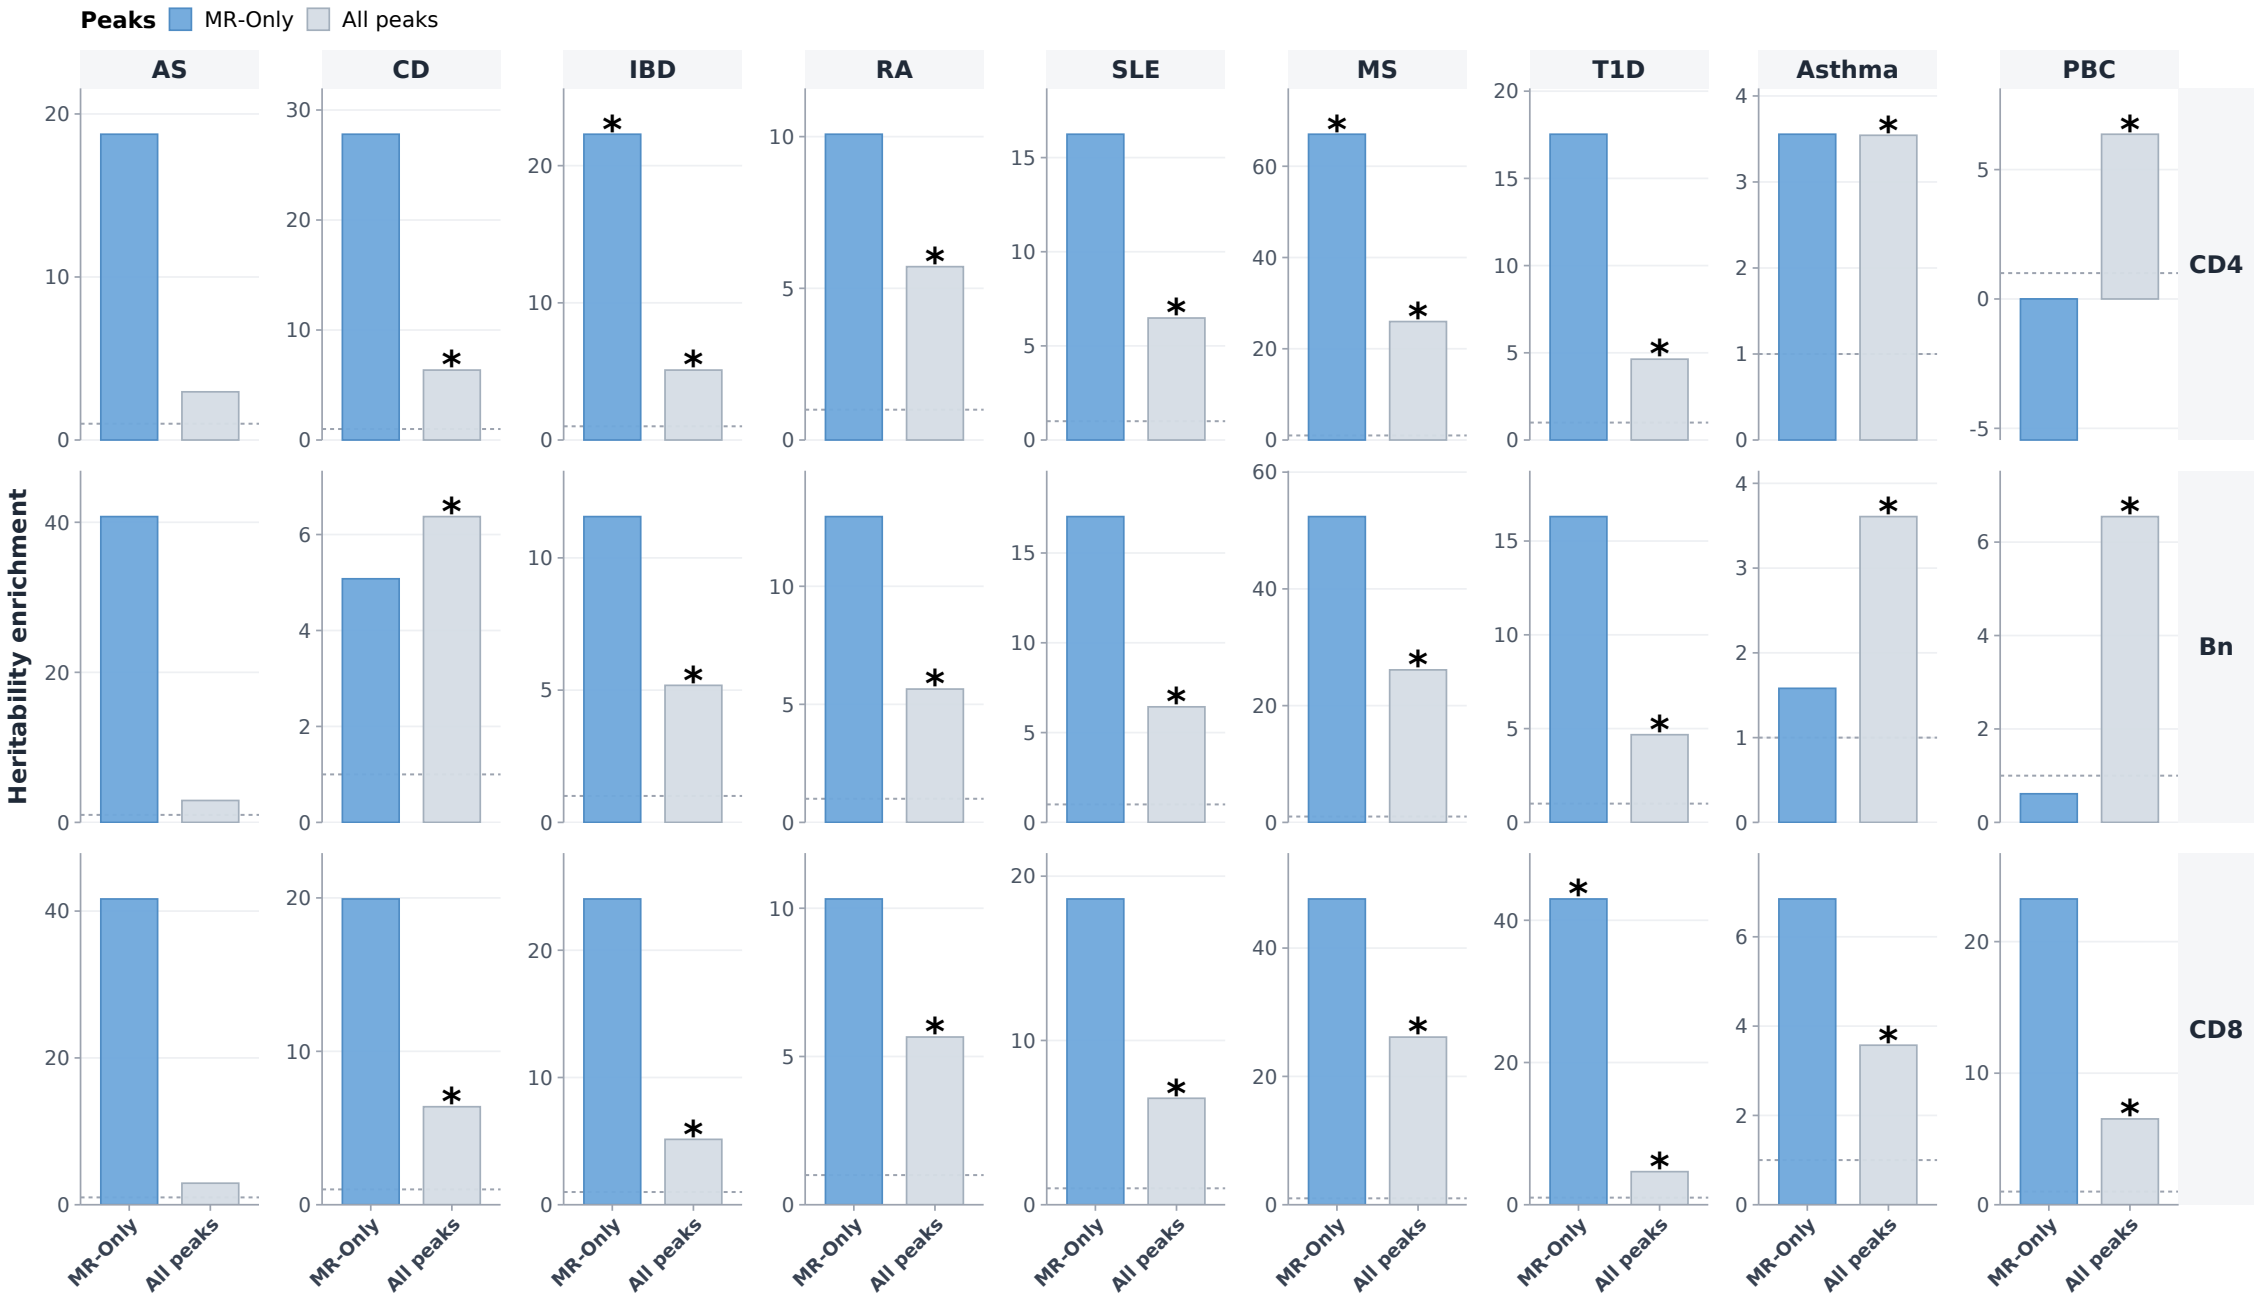
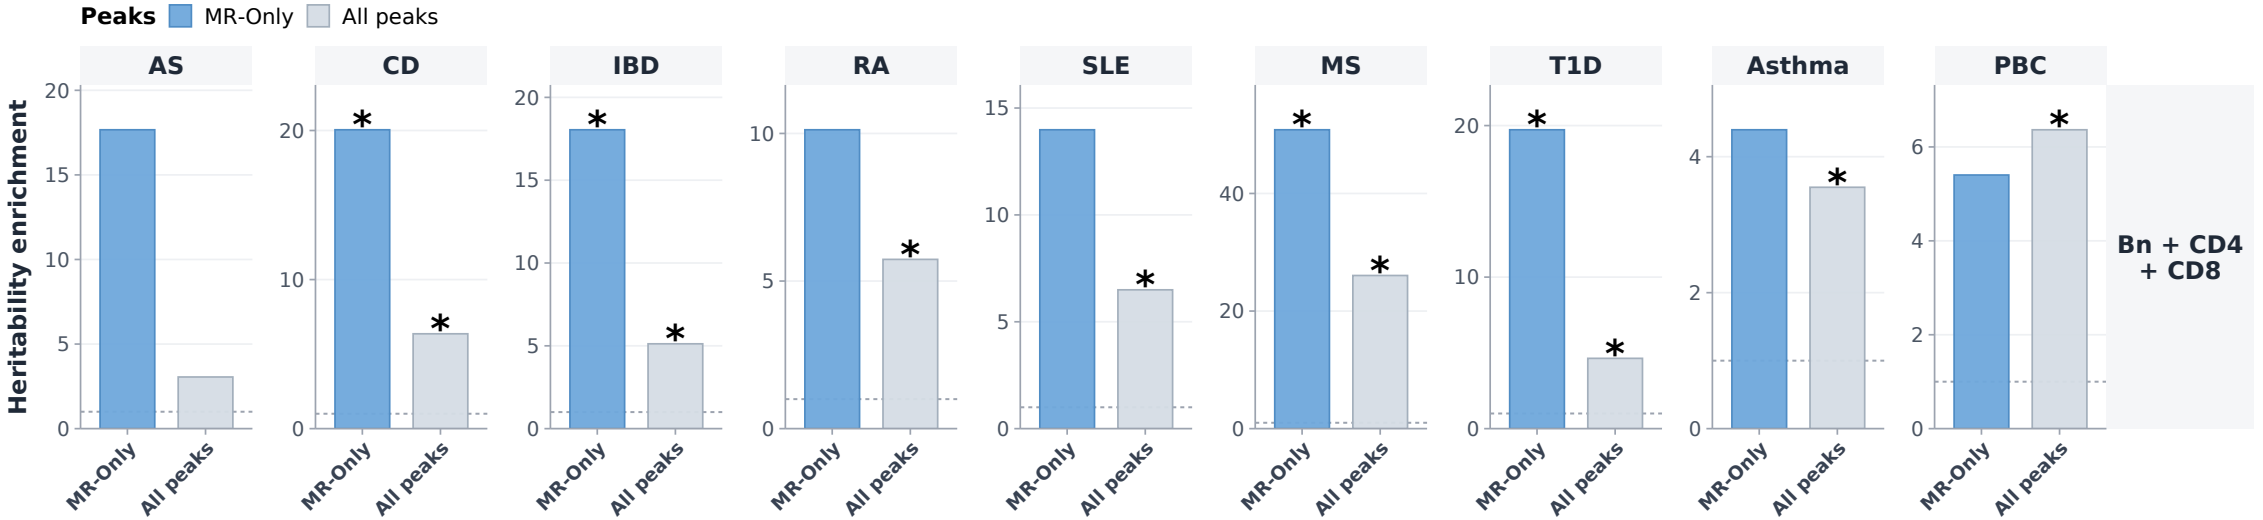
S-LDSC heritability enrichment: MR-Only peaks vs all candidate peaks

Peak extension = 500 bp. MR-Only = peaks of links significant (FDR < 0.1) in Causal SMR, IVW or Egger but in neither Multiomics nor Pseudobulk.
All peaks = all candidate peaks of the cell type. Each annotation conditioned on 97 baseline-LD annotations. Dashed line: enrichment = 1. * enrichment P < 0.1.



S-LDSC heritability enrichment: Bn + CD4 + CD8 combined


Peak extension = 500 bp. MR-Only = union of the MR-Only peaks of Bn, CD4 and CD8 (defined per cell type).
MR-Only = peaks of links significant (FDR < 0.1) in Causal SMR, IVW or Egger but in neither Multiomics nor Pseudobulk.
All peaks = union of all candidate peaks of the three cell types. Each annotation conditioned on 97 baseline-LD annotations. Dashed line: enrichment = 1. * enrichment P < 0.1.
